Wind up in Inbank!

We are looking for **software developer** to join our team.

We are looking for a back-end/full-stack developer who is passionate about software development and have experience with more than just a single object oriented language. You like to write clean code and can dig through complex problems. Programming language is just a tool for you and you want to adapt and learn new things. You also would feel comfortable expressing your ideas to stakeholders and other developers.

JOB DESCRIPTION

- develop and maintain Inbank systems
- integrate 3rd party services and build APIs for integrations
- participate in code reviews
- take part in business, IT architecture and design discussions
- solve problems, help team-mates

OUR DEV TOOLKIT

- Ruby, Rails, Java, Vue, NodeJS, AWS, Docker, PostgreSQL and room for new tools

YOU WILL FIT WELL IF

- you are ambitious and want to build great software
- you do not settle just for OK
- you are a friendly person and like to work in a team
- you adapt fast to changing situations and priorities
- you are hungry for new challenges and finding best solutions

YOU WILL STAND OUT IF YOU HAVE

- experience with Ruby (Rails) or Java (Spring boot)
- experience building financial software
